

Backend Engineer — Payments Platform

Ledgerly · Bengaluru, India (Hybrid, 3 days in office) · Full-time

About Ledgerly

Ledgerly provides payment and invoicing infrastructure for 25,000 small businesses across India and Southeast Asia, processing over ₹2,000 crore every month. Our engineering team values reliability, ownership and simple designs.

The role

You will join the Payments Platform team, which owns payment processing, refunds, reconciliation and integrations with banks and UPI partners. You will design and build services that are secure, highly available and easy to operate.

Responsibilities

- Design, build and operate backend services in Go or Java
- Build reliable integrations with payment gateways, UPI and banking APIs
- Design PostgreSQL schemas and write efficient queries for high-volume transactional data
- Build event-driven workflows using Kafka
- Ensure idempotency, consistency and auditability of financial transactions
- Improve observability with metrics, tracing and alerting (Prometheus, Grafana, OpenTelemetry)
- Participate in on-call rotation and lead post-incident reviews

Requirements

- 3–6 years of backend engineering experience
- Strong experience with Go or Java (Spring Boot)
- Solid knowledge of relational databases, transactions and indexing
- Experience with message queues (Kafka, RabbitMQ or SQS)
- Experience deploying services on AWS with Docker and Kubernetes
- Understanding of API design (REST, gRPC) and security best practices

Nice to have

- Experience in fintech, payments or other regulated domains (PCI DSS)
- Infrastructure as code with Terraform
- Experience with distributed systems patterns (sagas, outbox, retries with backoff)

Benefits

- Competitive salary (₹30–45 LPA) plus ESOPs
- Health insurance for you and your family
- Annual learning and conference budget
